

## High Volume CD & DVD Creation From Both Your Mainframe and Your Network!

### Overview

Few technologies create, store, archive, access and deliver information as effectively as the Data|WARE Enterprise CD/DVD solution. With its high capacity, fast and highly reliable creation, CD/DVD are ideal mediums for handling complex medical records and reports, financial records including check records, personnel records, computer-output reports, application data or any other type of complex data stream. CD/DVD are also approved by the SEC as a long term archive replacement for microfiche and paper.

Each CD can store over 100,000 pages of data and DVD can store 8 to 10 times more! Discs are significantly more secure than traditional paper or microfiche storage at a fraction of the cost. Luminex's Data|WARE Enterprise Systems are the most cost-effective information storage and delivery system available, allowing you to store and distribute your data for less than one-tenth of a cent per megabyte!

### Enterprise Solution

Data|WARE Enterprise provides fast, automated, high-volume disc production in an MVS mainframe or in a client/server environment. With the MVS solution, data can be indexed and is ISO-formatted directly on the host processor. The disc image is then transferred via high speed ESCON channel connectivity to the Enterprise CD/DVD Server, to be robotically written onto disc and labeled. In the client/server configuration, data is indexed and formatted directly on the Data|WARE Server and can be received from the network, from tape or even the MVS mainframe.

### Disc Creation, Distribution and Integrity

Data|WARE Enterprise does it all: indexes your report data, formats the information to disc standards, writes to multiple discs, prints disc labels and creates mailing packing lists for reliable and accurate distribution – all without operator intervention. Once your information is on disk, it is instantly available through any CD/DVD drive or library. And the System is highly reliable. To guarantee the accuracy of your information, the System performs integrity checks, automatically removing and uniquely labeling any faulty disc. A unique serial number printed on each disc allows you to reliably match the disc to the packing list to ensure 100% accurate delivery.

### Features & Benefits

#### "Lights Out" Operation

- High speed, automated disc creation & duplication
- Up to 18,000 discs per month with virtually no errors (based on a 2-writer system writing half full discs, approx. 300MB, running at 7x24)
- Automated client/server scheduler to initiate disc creation
- Write Once, Read Many (WORM) attributes of disc media

#### Accurate Custom Labeling

- Prints customized, in-line color disc labels
- Creates packing lists for ease and accuracy in mailing discs
- Bar-codes discs for the On-Line Shipping system to ensure accurate delivery

#### Powerful Indexing and Viewing

- Custom full-field indexing capabilities
- Comprehensive viewing options to permit quick, accurate data access

#### High Reliability Production

- Automated integrity checks
- Proven, performance with extremely low Systems downtime

#### Automated Shipping Capabilities

- PowerSCAN&SHIP automatically ships discs via all major shippers – FedEx, UPS, Airborne and USPS

#### Industry Standards

- Masters discs based on ISO-9660 standards

#### Comprehensive Customer Support

- Luminex offers comprehensive, professional service and support options, including 7x24x365 on-site service, to protect your investment

## Industry Leader

- The Data|WARE Enterprise product has been the industry leader in high volume disc production for over 10 years
- Data|WARE Enterprise Systems are installed and used in industry leading, Fortune 500 companies in medical, financial services, banking, government and telecommunications industries.

Operator Interface for Managing the CD/DVD Creation Process

## About Luminex

Luminex develops distinctive data storage products that tackle the complex challenges of storing, archiving, distributing and protecting data. Complemented by quality customer service, Luminex's innovative products create real value for our customers. Luminex's Virtual|BLUE™ line of mainframe channel attach products link IBM and plug-compatible mainframes with the open systems world of servers, disk storage, tape libraries and peripheral solutions, resulting in improved operations and economics for mainframe data storage and management. Luminex's Data|WARE™ product family simplifies CD and DVD creation for small to large businesses in finance, healthcare, prepress, government and education.

## Archiving: Powerful Indexing and Viewing

To effectively manage computer-generated reports, the System is available with report indexing and viewing software to permit users to find data efficiently on their archived discs. The indexing software provides full-field indexing for any 3211 line-mode data. We offer both mainframe and client/server versions of our indexer. The viewing software permits fast access to data and the ability to copy/paste/export to Windows application, spreadsheets or other commercial viewers. Luminex also offers indexing and viewing software for AFP and Xerox/Metacode.

## On-Line Shipping

Luminex's innovative Power SCAN&SHIP™ option uses a single, graphical user interface to automatically generate shipping waybills based upon the scanned bar-coded discs. Power SCAN&SHIP captures information for shipments by FedEx, UPS, Airborne and USPS and links directly to them via the Internet or dial-up connection, eliminating the need for costly and time consuming operator intervention.

## Superior Customer Support

Luminex provides a complete suite of professional installation, maintenance and support services for Data|WARE Enterprise Systems to protect your investment. The support includes reliable technical support at every stage of System implementation with options for on-site, 7x24x365 maintenance available.
